

FAST

SPINSTAR™

TRICK CHART

MASTER THESE 10 BASIC TRICKS

1 THE WIND UP

Start with the yoyo on the ground, not spinning. Wind the yoyo up as fast as you can!

2 GRAVITY PULL

The most basic of all yoyo tricks, yet the hardest to master. Make a muscle. Throw the yoyo down palm facing up. When the yoyo hits the bottom of the string, turn your palm down. Tug upwards SHARPLY and the yoyo should return to your hand.

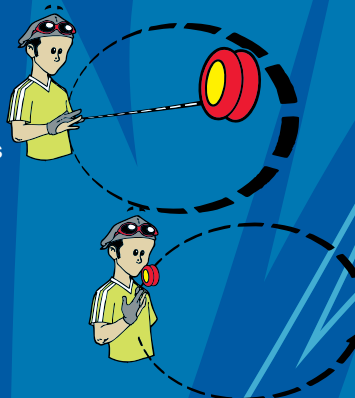

3 FORWARD PASS

Start from behind your back with your palm up. Then let go and bring your arm forward rapidly. Your yoyo will travel out in front of you. Pull it back to your hand and catch.

4 LOOP THE LOOP

Throw a Forward Pass. As the yoyo returns to your hand do not catch it. Instead, turn your wrist and flick it back out. It's important that this trick is done on the INSIDE of your arm.

5 WALK THE DOG

Throw a Sleeper. Allow the yoyo to touch the ground gently. Your yoyo will "walk" away from you. Your yoyo should "walk" at least one foot before coming back to your hand.

6 CREEPER

Throw a Sleeper. Gently touch the yoyo to the ground and walk it out in front of you until your hand touches the ground. Give a slight tug and it will creep back to your hand.

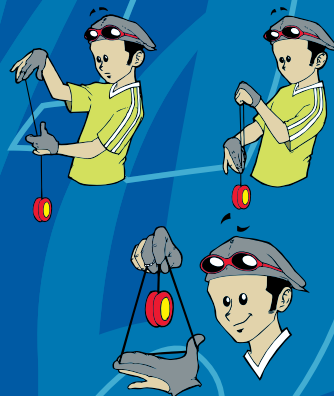

7 SPAGHETTI

Throw a fast Sleeper. Gather loops of string into your hand (to look like a hand full of Spaghetti). Rapidly open your hand and let the yoyo drop. The sudden drop will cause the yoyo to return to your hand. Make a slurping noise as it returns and it will look like you're eating Spaghetti!

8 ROCK THE BABY

Throw a Sleeper. Grab the string about one third of the way down with your free hand. Now swing your left fist down to form the cradle. Swing your yoyo three times through the cradle, then release.

9 STAR

Practice this trick with the yoyo not spinning. Place your fingers in the pictured position (like a bear claw). Direct the string from your middle finger over and around the outside of your little finger then under and around the outside of your pointer finger, over and around the outside of your ring finger and from the bottom and around the outside of your thumb then back to the top of your middle finger. This trick should resemble a star drawn on paper.

10 EIFFEL TOWER

Practice this trick with the yoyo unwound and not spinning.

1. Place your left hand in front of the hanging string. Stick out your pointer and thumb only.
2. Pull your left pointer finger and thumb back into the hanging string and to the left side. Next, pull aside the hanging string with your right thumb. Twist your left wrist back to put a twist in the string.
3. Pinch the hanging string between your left pointer and thumb.
4. Pull the pinched string through the loop and up.

LEARN FAST - PLAY F.A.S.T.®

Thank you for purchasing the SPINSTAR™ yo-yo, from YoYoFactory®. Be sure to follow all instructions carefully before using your yo-yo.

F.A.S.T.® (Fully Active Starburst Technology®) is designed for all levels of play. Quick, easy and precise adjustments help you to master all tricks. Choose the right setting for the trick you want to do.

PLAY IT SAFE

Don't aim yo-yo at people, pets, or breakables. Make sure you have a clear area before you throw. Keep yo-yos away from children under 3.

HOW TO ADJUST YOUR YOYO

Your SPINSTAR™ yo-yo adjusts allowing you to select the responsiveness to match your skill level.

MAXIMUM RESPONSE

1

Tighten yo-yo firmly. Look through holes on side of yo-yo. Align the holes on both halves so that you can see through them clearly. This is the MAXIMUM response setting. Use this setting for looping tricks and for easy wind-ups.

SLEEPER SETTING

2

Now look through the holes in the side of the yo-yo again. Untwist the halves slightly until the holes are misaligned. The SPINSTAR™ is now set for MAXIMUM sleep times.

ADJUST STRING LENGTH

The string comes from the factory set for the tallest possible player. If the string is too long the yo-yo will bang the ground and ruin your tricks. Adjust the string length by letting the yo-yo hang at the end of the string on the ground. Tie a new loop an inch or two above your belly button. The new loop should only be an inch long or less.

HERE'S HOW YOU TIE A LOOP:

1. First, fold down string approximately 2 inches (5cm)

Wrap the string around your fingers as shown.

3. Push through loop.

4. Pull tightly.

PLACE SLIP-KNOT ON MIDDLE FINGER HERE:

MAKE A SLIP-KNOT LIKE THIS:

BASIC TIPS

Throw yo-yo like this:

NEW STRING

First untwist string.

Place whole yo-yo in loop, do not take yo-yo apart to replace string.

IMPORTANT NOTE: ALWAYS PUT STRING ON LAST!

ASSEMBLY DIAGRAM

PLACE PARTS TOGETHER AS SHOWN, TWIST ON OTHER HALF

PLASTIC TRANSAXLE

WARNING:
CHOKING HAZARD - Small parts.
Not for children under 3 yrs.
