The loop720® is a whole new looping experience! Special technology utilized in the loop720® requires special care and maintenance. Follow these instructions carefully. If you want to explore more tricks for higher performance check out:

www.loop720.com

- 1 if your loop720® starts to loop up or loose it's ability to bounce back to your hand, change the string
- 2 if a new string doesn't do the job, a light drop of 3-in-1 oil on the side of the bearing will help boost performance
- 3 still no luck? try changing the weave of string in the body:

twist apart

*pop the cap
by banging
bolt on floor*

*remove old string
and weave in new
string using included
weaving device*

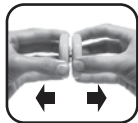

Check out www.loop720.com for different weave patterns that can enhance performance! This is how to reassemble:

*place bolt
in one half*

*place nut in
other half*

*twist together
and **PULL**
to re-seat
bolt and nut*

*For the main yoyo string **DO NOT** use 100% poly string. Use cotton blend or cotton string.*
